DETAILED ACTION

Claims **1-32** are present for examination.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims **1-8, 13-20, and 25-29** are rejected under 35 U.S.C. 103(a) as being unpatentable over Kanapathippillai et al (Publication No. US 2003/0056134 A1).

Kanapathippillai et al (see Fig. 37) clearly shows a memory access structure which includes a right memory array (3604R), a left memory array (3604L), a plurality of row lines and columns existed in each array, and an off-boundary row address decoder (3602) coupled to both arrays (in between) so to perform an off boundary memory access. Note that page 35 (see paragraph [0383]) stated that such off boundary access avoids the need of two access cycles thus inherently suggests the claimed "within one memory access cycle". Further, page 36 (or [391]) stated that the off boundary access receives the start address and a sequence number to access those left and right memory arrows. It would have been obvious to one skilled in the art that such boundary access decoder (3602) could be constructed as a plurality as necessary since the use of a plurality of

both row and column decoders associated with a plurality of blocks and/or arrays are well-known in the art.

3. Other claims recite the use of "multiplexer" arrangement which contains allowable subject matter over these cited arts.
